

md2pdf

Description

md2pdf is a simple tool convert markdown file to PDF file written by Haskell.

Usage

Please install *[HPDF]* (<https://hackage.haskell.org/package/HPDF-1.4.10>)

package to run this program. Try *cabal install HPDF* or other ways suggested

in the doc. Then run *runghc Main.hs fileName.md* in the directory. You can find

fileName.pdf in this folder soon. The *README.pdf* in this project is an example

converted from this readme file.

Feature

Since *HPDF* is an incomplete PDF package, this md2pdf tool can only convert some basic markdown format very roughly:

- * *Headings (from Heading 1 (biggest) to Heading 6 (smallest));*

- * *Italic text;*

- * **Emphasis text;**

- * *Inline Code;*

- * *Code;*

- * *Quote;*

- * *Hyperlink;*

- * *Unordered list;*
