# md2pdf

## Description

*md2pdf* is a simple tool convert markdown file to PDF file written by Haskell.

## Usage

Please install `[HPDF](https://hackage.haskell.org/package/HPDF-1.4.10)` and `[filemanip](https://hackage.haskell.org/package/filemanip)` to run this program. Try *cabal install HPDF* and *cabal install filemanip*. Then You can run *runghc Main.hs ./Sample/Sample1.md ./Sample/Sample2.md* in the directory to convert several markdown files. You can also run *runghc Main.hs ./Sample* in the directory to convert all markdown files to PDF files in *Sample* subdirectory. All PDF files in this project are the outputs of this tool.

## Feature

Since *HPDF* is an incomplete PDF package, this md2pdf tool can only convert some basic markdown format very roughly:

* *Headings (from Heading 1 (biggest) to Heading 6 (smallest));*

* *Italic text;*

* **Emphasis text**;

* *Inline Code*;

* *Code;*

* *Quote;*

* *Hyperlink;*

* *Unordered list;*
